PROFILE

Information Science graduate (B.Tech, **CGPA 8.72/10, top 5% of batch**) with **six months** of operations and business support experience in requirements gathering, process mapping and SQL-based data validation. Built two end-to-end operations analytics case studies on simulated data (550 support tickets, 160 orders), tracking **SLA compliance, on-time delivery and installation KPIs** in Excel and Python, and tracing delays to root causes.

SKILLS

- **Excel & Data:** Microsoft Excel (COUNTIFS, SUMIFS, AVERAGEIFS, INDEX/MATCH, SUMPRODUCT, data validation, conditional formatting), SQL (MySQL), Python (Pandas)
- **Reporting & Visualization:** KPI dashboards, KPI scorecards, Excel charts, Streamlit, Plotly
- **Operations Analysis:** SLA monitoring, root cause analysis, bottleneck analysis, trend analysis, data cleaning, data reconciliation, process improvement
- **Process & Documentation:** Process mapping, requirements gathering, workflow documentation, Confluence, Agile/Scrum, Git/GitHub
- **Technical & Other:** Java, Spring Boot, React | Stakeholder management, cross-functional coordination | Languages: English, Kannada, Hindi

EXPERIENCE

Operations & Business Support Assistant Feb 2026 – Aug 2026
Sai Heating & Cooling Solutions *Bengaluru, India*

- Gathered and documented functional requirements for project modules as clear specifications, giving business, development and QA teams one shared reference.
- Mapped end-to-end workflows and process flows in Confluence, creating a single process reference used across cross-functional teams.
- Wrote and ran MySQL queries to validate system data and flag discrepancies, ensuring data integrity and giving stakeholders verified figures for decisions.
- Coordinated sprint planning and task tracking across frontend and backend workstreams, keeping deliverables on schedule and aligned with business requirements.

PROJECTS

Order Fulfilment & Installation Performance Analysis | *Excel, Python (Pandas), Streamlit* Case Study | GitHub

- Cleaned a 163-row simulated order export into 160 validated orders under 10 documented rules (48 logged changes); reconciled Excel KPIs against Python across 175 checks with 0 differences.
- Built an Excel dashboard and a six-tab Streamlit dashboard tracking 72.4% on-time delivery, 60.2% on-time installation and a 22.4-day average order cycle time.
- Traced delay drivers: 24 of 47 late installations followed an on-time delivery (15 citing "customer site not ready"), and Custom and Commercial orders accounted for 23 of 37 late deliveries.
- Proposed a pre-delivery site-readiness check and a daily overdue-order review, setting baselines of 60.2% on-time installation and 9 overdue orders for measuring impact.

Customer Support & SLA Performance Analysis | *Excel* Case Study

- Analysed 550 simulated support tickets (Jul–Dec 2025) and built a KPI scorecard: 91.1% resolution rate, 79.4% SLA compliance against an 85% target, 35.8-hour average resolution time and 3.51/5 CSAT.
- Benchmarked four departments and identified Technical Support as the priority gap, with 68.7% SLA compliance, 3.14/5 CSAT and the longest resolution time (44.2 hours).
- Tracked monthly trends (volume up from 82 to 100 tickets as SLA compliance fell from 84.2% to 75.3%) and flagged 47 of 49 open tickets as overdue; recommended daily backlog reviews and workload rebalancing.

Robotic Arm for Pick-and-Place Using Image Processing | *Academic Project*

- Built a pick-and-place robotic arm with image processing (Java, sensors, motor control) to automate real-time object handling.

EDUCATION

B.Tech in Information Science and Engineering Sep 2023 – Mar 2026
R.R. Institute of Technology, VTU, Bengaluru CGPA 8.72/10 | Top 5% of batch

CERTIFICATIONS

- Google Data Analytics Professional Certificate | IBM SkillsBuild Data Analytics Credential
- Artificial Intelligence – NoviTech R&D Private Limited | Java Full Stack with Cloud and DevOps – Dhee Coding Lab
